

12-lead Electrocardiogram (ECG)

A 12-lead electrocardiogram (ECG) is a non-invasive test that records the heart's electrical activity. ECGs are a valuable tool to detect a multitude of heart conditions such as arrhythmias, evidence of myocardial infarction (heart attack) and other heart conditions.

There is no preparation for an ECG. 12 stickers are placed across the chest and limbs which are connected to an ECG system. The test should take no longer than a couple of minutes to complete and is part of your baseline routine cardiology assessment.
